## Gen II

*Gen II* is a rules-driven, 100% true web-based Business Process Management engine. It is designed to help companies optimize their business processes. *Gen II* is highly customizable. We will tailor it to fit your needs in a very short period of time.

## Technology

*Gen II* runs on LAMP, an Open Source Website platform combination of Operating System (Linux), Web server (Apache), database (MySQL) and scripting language (PHP). Known for its reliability, LAMP is the platform of choice for the development and deployment of high performance web applications. The LAMP platform offers a low-cost and highly productive programming environment, particularly for web-based applications.

## Dynamic with Control

On top of offering a dynamic website to load and save information, *Gen II* offers control from every angle. Depending on his profile, a user will see a page tailored to fit his read, write and viewing rights. Different users see different versions of the pages they access according to defined controls.

## Data Control

This controls the permissions for accessing each field in the database. Each field can be controlled as read-write, read-only, or no access.

## Profile Control

The system uses different profiles to control the pages users have access to. In addition, profiles control the fields a user has access to on these pages. A system administrator has access to all the pages and fields in the system. A loan processor, however, would not have access to the accounting pages or the underwriting pages. We deliver *Gen II* with various standard profiles. These profiles can be easily customized to match the requirements of individual companies

## OnLoad Control

The OnLoad Control operation is carried out as a page is displayed to the user. An OnLoad operation controls field behavior such as data visibility, display properties, and user access. With this operation, users can easily customize the fashion in which data is displayed. For example, users have the flexibility to choose whether a new unread loan is displayed in a bold, underlined, or strikethrough format.

## Customization

Each mortgage banker has different requirements and needs. *Gen II* was designed to accommodate these needs. The ease of customization of the *Gen II* software is unprecedented in the industry. Our goal is to tailor *Gen II* to match your operational process rather than you having to adjust what you do to fit the software.
